### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Darin W. Harris on April 22, 2004.

The application has been amended as follows:

In amended claim 11, line 6, please insert -- at room temperature -- after the words : with the hydrogen.

Please add the following new claims:

17. (New) The hydrogen storage material of claim 1, wherein the room temperature is 25°C.

18. (New) The electrochemically active material of claim 11, wherein the room temperature is 25°C.

19. (New) The electrochemical cell of claim 12, wherein the room temperature is 25°C.

Art Unit: 1745

20. (New) The electronic equipment of claim 13, wherein the room temperature is 25°C.

### REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: The Applicant claims a hydrogen storage material comprising hydrogen and a magnesium-containing intermetallic compound capable of forming a hydride with the hydrogen at room temperature wherein the intermetallic compound includes an alloy of magnesium and a trivalent metal selected from a group consisting of Sc, Y, and the actinide series of rare earth elements.

Applicant claims an electrochemically active material comprising a hydrogen storage material as described above.

The Applicant claims an electrochemical cell comprising a positive electrode, and a negative electrode, the negative electrode including a hydrogen storage material as described above.

Applicant claims electronic equipment powered by at least one electrochemical cell, each cell comprising a positive electrode and a negative electrode, the negative electrode including a hydrogen storage material as described above.

In the prior art of record, Ovshinsky et al., U.S. Pat. No. 6,491,866 B1, claim a hydrogen storage material which comprises an alloy of magnesium and yttrium.

Art Unit: 1745

However, the prior art of record does not disclose the magnesium alloy capable of forming hydride with hydrogen at room temperature. Further, there is no suggestion in the prior art to form the hydride at room temperature since the examples teach a temperature of approximately 600 to 850 degrees C.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Angela J. Martin whose telephone number is 571-272-1288. The examiner can normally be reached on Monday-Friday from 9:00 am to 5:00 pm.
